This amino acid sequence was predicted from the cDNA sequence of cDNA clone p98/X2. It differs from the sequence predicted from clone p985 (see Q211/8) at position 25; p135 encodes a Ser residue while clone p98/X2 predicts a Thr residue. At position 58, p90

Ser residue 58, p90

of the p98 product

is truncated

compared

e; the C-terminal sequence with those of the p135

cDNA clone, p98 (T14718), obtd. from a cDNA library using an immunoselection cloning method. FcRI is a high affinity receptor for the FC portion of IgG, normally located on cell surfaces of macrophages. 2 Other cDNA clones, p135 (T14717) and p90 (T14719), coded for a variants of the FcRI sequence; the C-terminal sequence

The amino acid

sequence (R91439) of human

FcRI was detd.

Sequences predicted from all 3 clones show the typical features of a type I integral membrane protein and include a short hydrophobic signal sequence, a single 21-residue hydrophobic membrane-spanning domain, and a short, highly charged cytoplasmic domain. The extracellular portion contains six potential N-linked glycosylation sites and six Cys residues distributed among three C2 set Ig-related domains. A fusion protein of FCRI and a receptor ligand will be helpful to increase the potency of antibodies in therapy.

epitopes on different molecules. The genes/oligonucleotides that encode selected peptides can be isolated and used for recombinant production of antibodies. Selected antibodies are used, e.g. for immunohistochemical or immunofluorescent analysis, and also to detect cell transformation caused

0;

by mutation

in (anti)oncogenes.

surface of a replicable display package, synthesising oligopeptides derived from the target protein on a solid phase, and testing for binding between the peptide and oligopeptides. The method is used to screen large peptide libraries, especially to detect antibodies, or their fragments, that bind to cell markers or that can differentiate between different forms of the same protein, including bispecific antibodies that bind to two non-overlapping epitopes on the same monomeric antigen or two

Synthetic oligopeptides W60537-61 are derived from the extracellular domain of CD64. They were synthesised on 25 polyethylene rods as adjacent, non-overlapping sets. Peptide specific phages were isolated by affinity binding to the CD64-covered rods. The specification describes a method for the identification of a peptide able to bind specifically to a target protein. The method comprises displaying the peptide on the curfect of a requirement.

It differs from the sequence predicted from clones p98/X2 and p90 (see Q21179 and Q21180, respectively) at position 25; p135 encodes a Ser residue and the other two clones predict a Thr residue. At position 58, p135 predicts Leu and p90 predicts Val. Sequences predicted from all 3 clones show the typical features of a type I integral membrane protein and include a short hydrophobic signal sequence, a single 21-residue hydrophobic membrane-spanning domain, and a short, highly charged membrane-spanning domain, and a short, highly charged
                                                                                                                                                                                                                                                                                                                                                                                                                   cytoplasmic domain. The extracellular portion contains six potential N-linked glycosylation sites and six Cys residues distributed among three C2 set Ig-related domains. A fusion protein of FCRI and a receptor ligand will be helpful to increase the potency of antibodies in therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            and clone p90 predicts a Thr residue. At position 58, p90 predicts val while clones p135 and p98/XZ (see Q21179) both predict Leu. Sequences predicted from all 3 clones show the typical features of a type I integral membrane protein and include a short hydrophobic signal sequence, a single 21-residue hydrophobic membrane spanning domain, and a short, highly charged cytoplasmic domain. The extracellular portion contains six potential N-linked glycosylation sites and six Cys residues distributed among three C2 set Ig-relate domains. A fusion protein of FCRI and a receptor ligand will be beliefed.

Other CDNA clones (see also T14717-18) coded for variants (R91438-39) of the FCRI sequence. A fusion protein of FCRI and a receptor ligand will be helpful in increasing the potency of antibodies in therapy.

                                                                                                                                                                                                                                                                 produce the encoded protein. The invention also provides high efficiency expression vectors (see V63441 and V63444) which allow the generation of very large mammalian expression libraries. The purified genes and proteins are useful for immunodiagnostic and immunotherapeutic applications, including the diagnosis and
                                                                                                                                                                                                                                                                                                                                               expression libraries is based on transient expression of an antigen in eukaryotic cells and selection of cells expressing the antigen by adhesion to an antibody-coated substrate. The method is useful for the isolation and cloning of any protein which can be expressed and transported to the cell surface membrane of a eukaryotic cell. It has been used to clone genes (see V63442-63) encoding cell surface antigens from mammalian lymphocytes (see W80440-55). The isolated

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     genes can be expressed in a prokaryotic or eukaryotic host cells to produce the encoded protein. The invention also provides high efficiency expression vectors (see V63441 and V63444) which allow the generation of very large mammalian expression libraries. The purified genes and proteins are useful for immunodiagnostic and immunotherapeutic applications, including the diagnosis and treatment of immunotherapeutic applications, including the diagnosis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       in eukaryotic cells and selection of cells expressing the antigen by adhesion to an antibody-coated substrate. The method is useful for the isolation and cloning of any protein which can be expressed and transported to the cell surface membrane of a eukaryotic cell. It has been used to clone genes (see V63442-63) encoding cell surface antigens from mammalian lymphocytes (see W80440-55). The isolated

Covere also obtained. A novel method for cloning cDNAs from mammalian expression libraries is based on transient expression of an antigen of in eukaryotic cells and selection of cells expressing the antigen by adhesion to an antibody-coated substrate. The method is useful for the isolation and cloning of any protein which can be expressed and transported to the cell surface membrane of a eukaryotic cell. It has been used to clone genes (see V6344-63) encoding cell surface antigens from mammalian lymphocytes (see W80440-55). The isolated genes can be expressed in a prokaryotic or eukaryotic host cells to produce the encoded protein. The invention also provides high the generation of very large mammalian expression libraries. The purified genes and proteins are useful for immunodiagnostic and immunotherapeutic applications, including the diagnostis and treating at immunocharapeutic applications, including the diagnostis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           13-JUL-1989;

                                                                                                                                                                                                                                                                                                                                                                                                                     This is the amino acid sequence of human Fc receptor I (FCRI), as deduced from cDNA clone p98/X2 (see X07373) isolated using a rap immunoselection cloning method from a cDNA library expressed in cells. The cDNA library was constructed from polyA RNA of cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New cloning vector and polylinker - based on existing sequences for efficient cloning and expression of mammalian cDNA(s), especially human lymphocyte antigenic sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Aruffo A,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          01-DEC-1992;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          immune-complex disease, amyloidosis, parasitic diseases or multiple sclerosis. FCRI is a high affinity receptor for the FC portion of IGG, normally located on the cell surfaces of macrophages. The ability to interfere with such bonding, or to cause it to occur on surfaces other than macrophages, is useful in therapy. A fusion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           treatment of immune-mediated infections, diseases, and diso

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           may be modified to produce recombinant versions. The recombinant FC receptor consist only of the extracellular portion of the receptor and are not glycosylated; e. they do not have transmembrane domains or signal peptides. The recombinant proteins may be used in immunoassays to determine the immune status of patients with chronic diseases of the immune system, e.g. AIDS, systemic lupus erythematosus (SLE), multiple myeloma (MM), or rheumatoid arthritis. In addition, pharmaceutical compositions containing recombinant proteins may be used to treat or prevent autoimmune diseases, allergies or tumours, especially AIDS,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     role in defending the body against infections. First, pathogens are opsonised by serum immunoglobulins. The resulting complex then binds cells expressing for receptors. FogammaRI molecules are expressed by monocytes and macrophages, but expression can also be induced on neutrophils and eosiophils. Upon Fc receptor activation, immune efformet trophils and eosiophils.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 allergic reaction; graft versus host disease; organ rejection; haemostatic; thrombolytic; cardiovascular disorder; infection:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is the human high affinity Fc receptor, FcgammaRI FcgammaRI is also known as CD64. Fc receptors play an important
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     antidiabetic; antiasthmatic; antirheumatic; antiarthritic; antiviral;

XX

New immunoglobulin binding hybrid Fc receptor molecules - used to PT control auto-immune diseases and allergic reactions and to regulate PT antibody prodn.

XX

Claim 10; fig 3B; 80pp; English.

XX

Claim 10; fig 3B; 80pp; English.

XX

Claim 10; fig 3B; 80pp; English.

XX

CC

This chimeric sequence is one example of a hybrid Fc receptor CC

CC functions of the constituent receptor types. It can be used for CC

CC requiating antibody production in vivo and in plasmaphoresis to CC

CC remove immune complexes or pathological antibodies. Rabbit IgG

CC bound to cells transfected with the chimeric Fc(gamma) receptor.

   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                           Score
